ACKNOWLEDGEMENTS

Members of the Bridge to Health Collaborative deserve credit for all that went into the planning, funding, conducting, and producing *Bridge to Health Survey 2000*. The Collaborative includes members of 118 local, regional, and state health-related organizations serving northeastern Minnesota and northwestern Wisconsin. It is an unincorporated, all volunteer organization with the following Mission Statement:

Through a collaborative effort, take an active role to understand and improve the health status and quality of life of the communities within the region. This will be achieved by conducting periodic assessments and serving as a catalyst for interventions to improve health.

The Bridge to Health Collaborative greatly appreciates the financial contribution from the Allina Foundation, Project REACH that provided the majority of funding for *Bridge to Health Survey 2000*. Without this assistance, *Survey 2000* would not have been possible. Other major sponsors include the Duluth Clinic Foundation and St. Luke's Foundation. (A listing of all financial sponsors appears on the following page.)

Members of the Collaborative and the organizations that they represent contributed countless hours to the *Survey 2000* effort. The Collaborative is greatly indebted to Derryl Block (University of Minnesota, School of Nursing) who served as Project Coordinator overseeing all aspects of the project and who was intimately involved with data collection and analysis. A special thank you goes to Ann Kinney and the Minnesota Department of Health, Center for Health Statistics for the many hours of the technical assistance and guidance provided to this project.

The primary authors of this report are:

Derryl Block, University of Minnesota School of Nursing
Ann Kinney, MN Department of Health, Center for Health Statistics
Larry Sundberg, St. Louis Co Department of Public Health and Long Term Medical Care
Jenny Peterson, St. Mary's Duluth Clinic Health System
Gayle Kelly, Independent Consultant

The following members of the Bridge to Health Collaborative also had major roles in checking data and drafting individual chapters:

Linda Basara, St. Luke's Hospital and Regional Trauma Center
Lynn Devlin, St. Luke's Hospital and Regional Trauma Center
Dave Davison, A Positive Approach Mental Health Services
Vickery French, University of Minnesota-Duluth, Rural Health School
Nancy Ojard, First Plan of Minnesota
Bruce Penner, Northstar Physicians, Inc.
Jenny Peterson, St. Mary's/Duluth Clinic Health System
Jim Skoog, St. Louis County Department of Public Health and Long Term Medical Care

Others who deserve recognition for *Bridge to Health Survey 2000* are: Mike Finch (United Health Care and the University of Minnesota) who was the Project Facilitator and provided research assistance as well as enthusiasm for *Bridge to Health* since 1995; Gayle Kelly, Project Consultant, responsible for editing and production of the final report; Steven Greenfield who aided in data analysis; and Cindy Erickson who assisted with production of the report.

BRIDGE TO HEALTH SURVEY

ITASCA COUNTY SUMMARY

This report contains results from the Bridge to Health Survey 2000 specific to **Itasca County**. The Bridge to Health Survey represents a unique, collaborative effort among health care organizations in sixteen Northwestern Wisconsin and Northeastern Minnesota counties to better understand the health status of the region's population. The Bridge to Health Survey 2000 was conducted from November 1999 to February 2000. The introductory pages of this document are replicated from the regional summary report.

Due to the smaller sample sizes on which the county level analyses are based, this county summary report includes 95% confidence intervals for the results. Confidence interval ranges appear to the right of each summary statistic within the tables. The sample sizes for the county are shown in Table A.1.1 on the next page of this report.

The interpretation of a 95% confidence level is that there is a 95% probability that the true percentage for the population falls within the range of the confidence interval. In general, the smaller the sample size, the wider the confidence interval, which means the less precise the result. Because county level analyses are based on much smaller sample sizes, county level results are less precise than regional level results. When the level of analysis is the entire region the 95% confidence interval tend to have a range of the result plus or minus 1%. When the level of analysis is the entire county the 95% confidence interval tends to be the result plus or minus about 5.5%. Therefore, while the results for the county and the Bridge to Health region may at times be similar, the county level results have considerably less precision due to smaller sample sizes.

An example illustrates the above point. Suppose that at both the region and county level, 25% of the respondents answered "yes" to a certain question. The 95% confidence interval range for the region level result would be around 24%-26%, while the range for the county level result would be about 20%-30%.

The Bridge to Health Survey team decided not to show any result based on data for 30 or fewer respondents. In the tables in this report, "NA" is displayed whenever this occurs, and at the bottom of the table a footnote appears that reads "Results by demographic factors for this geographic area are not shown when cell size is 30 or less."

INTRODUCTION

The *Bridge to Health Survey 2000* was designed to gather population-based, health status data about adult residents in a sixteen-county region in Northeastern Minnesota and Northwestern Wisconsin (total population approximately 481,000). The goal of the survey was to provide information to enable communities to better understand the health and well-being of their residents. Such information is necessary for planning and evaluating health-related programs and services.

The impetus for the survey effort was a gap in *local* information on important indicators of health status. The *Bridge to Health Survey 2000* augments existing data to provide a more complete picture of the region's current health status.

The first *Bridge to Health Survey* was conducted in 1995 as a collaborative effort of 70 health-related organizations representing public health, tribal health services, hospitals, clinics and educational institutions. The *Bridge to Health Survey 2000* was also a collaborative endeavor, and by the fall of 2000 the Bridge to Health Collaborative had grown to include 118 members.

INFORMATION GAP MOTIVATES ONGOING, LOCAL DATA COLLECTION

Existing data from state vital records indicated that heart disease, cancer, stroke, pulmonary disease and injuries are the primary causes of death in this region. However, there was an "information gap" concerning other critical indicators of health status. For example, information about health risk behaviors (e.g., smoking, seat belt use, substance abuse, diet, preventive screenings, etc.), disease prevalence and health care access was available at the state level from the Behavioral Risk Factor Surveillance System, but there was concern that state level data may not sufficiently represent rural areas such as Northeastern Minnesota and Northwestern Wisconsin. (This particular region is more sparsely populated and is demographically older than either state.) Since the sample size of the statewide surveys was too small to allow for analysis at the county or community level, local survey data collection was needed.

The desire for reliable, local data that would provide an accurate picture of a community's health status was thus the major impetus for health care organizations to collaborate on both the 1995 Survey and the *Bridge to Health Survey 2000*. Other factors that influenced local health organizations to participate in a region-wide survey process included:

- Desire to individually and collectively use survey results to address local health issues.
- Need for accurate local data to target health care resources more effectively.
- Desire to develop baseline data in order to measure changes in health status over time.
- Expectation that the process would encourage cooperation among local health organizations.
- Hope that the information would be a catalyst for creating healthier communities across the region.

HISTORY OF THE PROJECT

In March 1995, health organizations from throughout Northeastern Minnesota and Northwestern Wisconsin gathered to explore the idea of working together to collect local information on the population's health status. The first *Bridge to Health Survey* was planned from March 1995 to October 1995, and data were collected October to December 1994. The *Bridge to Health Survey 2000* was planned between October 1998 and October 1999, and data were collected November 1999 to February 2000.

The process used was similar for both the 1995 and 2000 surveys. Three work groups were established to direct the survey process: 1) the Data Team determined the survey methodology, reviewed survey tools and designed a customized survey instrument; 2) the Communications Team was responsible for internal communications among project sponsors as well as external communications to the general public (e.g., media relations, newsletters and press conferences); and 3) the Steering Committee reviewed recommendations from both of the Teams and served as the final decision-making body.

In planning the *Bridge to Health Survey 2000*, results of the 1995 survey were reviewed to determine improvements that could be made. Many new questions related to tobacco use were incorporated into the 2000 survey in response to the Bridge to Health Collaborative's development of focused interventions to reduce tobacco use in the region. An attempt was made to keep the questions in the 2000 survey as consistent as possible with those in the 1995 survey to allow for monitoring change over time.

Evaluation of utilization of the *1995 Bridge to Health Survey* showed that the survey results were used extensively by Collaborative members to plan and gain funding for programs and services in the region (1). It is the intention of the Bridge to Health Collaborative that the rich data from the *Bridge to Health 2000 Survey* will be equally useful to the region.

FOCUS OF THE SUMMARY REPORT

The *Bridge to Health Survey 2000 Summary Report* is intended to be a data resource book for the topics covered in the survey. Chapters are organized by topic area. Demographic and geographic differences in the survey findings are highlighted with bulleted text and figures. Some of the major themes that are recurrent in the findings include:

- Relationship of Poverty to Health Status and Health Risk Behaviors
- Health Status and Health Risk Behaviors of the Older Population
- Regional and Urban/Rural Differences in Health Risk Behaviors and Access to Care

REFERENCE

METHODOLOGY AND DEMOGRAPHICS

The *Bridge to Health Survey 2000* data were collected through 6,251 computer-aided telephone interviews conducted by the Survey Research Center of the Division of Health Services Research and Policy located in the School of Public Health at the University of Minnesota. The Bridge to Health Collaborative decided to change from the mixed methodology used in 1995 (a self-administered mail-back survey with telephone follow-up of non-respondents) to an all-telephone data collection format for the 2000 survey. The decision to change to all-phone was based on a number of advantages of telephone over mail-back designs. These advantages included a higher level of quality control (e.g. questions are not accidentally skipped, and respondents are less likely to refuse to answer individual questions), generally higher response rates due to the ability to make many more attempts to contact respondents, and more rapid availability of the data due to simultaneous data entry.

A press release was sent to the regional media in order to notify the general public about the project and of the possibility of being contacted as a respondent. In addition, survey sponsors designed local efforts (such as radio interviews, television interviews and articles in local newspapers) to inform their communities of the importance of the project.

Sample Design

As in 1995, the sample for the 2000 survey was designed with four goals in mind: 1) to provide data specific to the 16-county region as a whole, yet with sufficient sample size to detect small differences over time; 2) to allow for comparison of the Northeastern Minnesota region and the Northwestern Wisconsin region; 3) to allow for comparison of urban and rural respondents; and 4) to provide county level data with a sufficient level of statistical precision (± 5.7 percentage points).

To accomplish the four goals, a disproportionate stratified sampling method was employed. Eighteen geographic strata were defined. St. Louis County, MN was split into two strata: the city of Duluth and the remainder of the county. Similarly, Douglas County, WI was split into two strata: the city of Superior and the remainder of the county. The remaining 14 counties each comprised one stratum.

The sample was designed to provide an approximately equal number of respondents in each stratum, with one exception. The city of Duluth was oversampled to provide a large enough number of respondents from the urban (i.e. Duluth/Superior) area to be able to detect statistically significant differences between the rural and urban regions.

The sampling frame consisted of households in the region with telephones. A random sample of households with telephones within each of the 18 strata was purchased from Genesys Sampling Systems, a division of Marketing Systems Group of Fort Washington, PA.

Data Collection

One adult (age 18 and older) from each sampled household was selected to participate in the survey. To select the respondent, the person answering the telephone was asked to identify the adult in the household who had most recently had a birthday. This individual became the designated respondent. The interviews lasted an average of 15 minutes.

Survey Response

In the *Bridge to Health Survey 2000*, 8,449 eligible households were contacted by phone between November 1999 and February 2000, with 6,251 interviews completed. The result was a response rate of 74.0%, a considerable improvement over the response rate obtained in the 1995 survey (64%).

Statistical Weighting of Data

Statistical weighting of the Bridge to Health data was necessary due to the design of the sample. The weights account for differences in household size, differences in the size of the population in each of the 18 strata, and differences in response rates between men and women and people of different ages.

A four-step procedure was used to calculate the weights. The first step involved weighting the data by the inverse of the selection probability within the household (i.e. the number of adults age 18 and older living in the household).

The next step was to weight the data by the actual size of the adult population in each of the 18 strata divided by the number of respondents from each stratum. This step ensured that the data from each stratum counted toward the results for the region as a whole in the same proportion as the population from that stratum counted toward the population in the Bridge to Health region as a whole. Population data were obtained from 1998 U.S. Census estimates of population size (1).

The third step was to post-stratify the data based on the 1998 U.S. Census estimates of the age and gender distributions for adults within each of the eighteen strata (2,3). This accounted for any under-representation or over-representation within the data set by gender and/or age.

The last step was to divide the weights by a numeric constant, which forced the weighted total sample size to be equal to the total number of respondents in the sample.

There were 93 respondents who did not provide their age and/or the number of adults living in the household. Since this information was needed to calculate the weights, these respondents were dropped from the analyses used to produce this report, making the final sample size n=6,158.

Limitations of Findings

There are several sources of bias that can affect data collected via survey. Some possible sources of bias include mode of administration (e.g. telephone), non-response, and factors related to the respondents.

The failure to include data from residents in the Bridge to Health region who did not have telephones is a potential source of bias because adults without phones may be different from adults who have phones. However, non-telephone bias was not expected to be large in the regional data overall, since according to 1990 U.S. Census data, 95% of all households in the Bridge to Health region had telephones (3).

Non-response may be another source of bias. For instance, some sampled households were not contacted, and some selected respondents were not interviewed. Additionally, some respondents refused to answer specific questions on the survey. Bias occurs if those who did not respond are somehow different than those who did respond.

Other potential sources of bias relate to differences among respondents in their interpretations of questions, honesty in answering, accuracy of recall and willingness to disclose information.

PROFILE MEASURES IN THE REPORT

The tables of results incorporate a standard set of demographic and geographic comparisons including gender, gender by age, educational attainment, poverty status, urban and rural areas of residence and state geographic regions of residence (Northeastern Minnesota and Northwestern Wisconsin).

Many of these characteristics were associated with each other. For instance, respondents' poverty status was closely related to educational attainment and age. Results observed among respondents with less than a high school education relate very closely to those observed among the elderly, which is partly due to the older age of the respondents with less than a high school education. Additionally, almost one-half (47.4%) of respondents 65 years of age and older were classified as living at/or below 200% of poverty.

A. Gender and Age

Results for all tables include a breakdown of results by gender with male and female respondents listed separately. Many topic areas covered in the Bridge to Health Survey have wide variation not only for gender and age but for the interaction of these two variables. Thus, a breakdown by age into seven categories (18 to 24, 25 to 34, 35 to 44, 45 to 54, 55 to 64, 65 to 74, and 75 years and older) appears for males and for females (Figure A.1).

B. Education

Tables also include a breakdown by respondents' highest level of educational attainment. Highest level of educational attainment is categorized into five groups: less than a completed high school education; high school graduate; some college education; graduate from a vocational, trade, or associate degree program; or a bachelor's degree or higher level of education.

Educational attainment was inversely related to age except for the college degree level of education. Thus, respondents with less than a high school education were substantially older as a group than those with higher educational levels. This is displayed graphically in Figure A.2.

C. Poverty Status

Poverty status was determined from respondents' household size and reported income. Respondents were asked to indicate the category of income that applied to their household for the last year. The income categories corresponded to percentages of the 1999 poverty guidelines set by the U.S. Department of Health and Human Services according to the number of people in the household. The tables in this report show two categories of poverty: 200% of poverty or less, and more than 200% of poverty. For example, a respondent with a household size of four with an income of \$33,400 was classified as living at or below 200% of poverty.

D. Geographic Area of Residence

There are three reporting levels for this report based on geography (Map A.1). The first level is an overall region-wide summary that encompasses all 16 counties (made up of 18 geographic strata) in Northeastern Minnesota and Northwestern Wisconsin. The second level is an urban versus rural comparison where the Duluth and Superior area is compared to rural Northeastern Minnesota (excluding Duluth) and rural Northwestern Wisconsin (excluding Superior). The third level is a regional comparison of all of Northeastern Minnesota (including Duluth) with all of Northwestern Wisconsin (including Superior).

For all comparisons, findings that are summarized within each chapter reflect differences tested statistically significant at the .05 level. This means that the probability of the observed difference among the categories of demographic or geographic characteristics occurring by chance is less than 1 in 20. Statistical tests included one-way analysis of variance (ANOVA) and chi-square tests of independence.

BRIDGE TO HEALTH SURVEY 2000 REGION

E. Characteristics of the Sample Population (Table A.1) (Figures A.1-A.4)

- Half of the respondents were male and half female (49.0% and 51.0%, respectively).
- Respondent age ranged from 18 to 99 years, with the mean age of 48.4 years, median age of 46.0 years and standard deviation of 17.9 years. The age and gender distribution of the sample is described in Figure A.1.
- The educational attainment of the sample was high, with only 8.9% having less than a high school education. Almost 3 out of 10 respondents had a vocational/associate degree or a college degree (10.7% and 18.4%, respectively) (Table A.1).
- The median age of those with less than a high school education was significantly higher than the median age of other educational groups (66.5 years vs. 44.0 to 47.0 years) (Figure A.2).
- Poverty status had a U-shaped relationship with age: respondents age 18 to 24 and those age 75 and older were more likely to have incomes at or below 200% of poverty than respondents in other age groups (Figure A.3).

Poverty was inversely related to educational attainment. Over half (56.6%) of respondents with less than a high school education had incomes at or below 200% of poverty, compared to 12.1% of respondents who were college graduates (Figure A.4).

COMPARING 1995 AND 2000 BRIDGE TO HEALTH SURVEY RESULTS

Readers are encouraged to read the text carefully to note differences in the presentation of results or in question wording between the 1995 and 2000 Bridge to Health Survey results. While changes may be seen for some indicators between the 1995 and 2000 Bridge to Health Survey results, readers are strongly cautioned against interpreting such changes as trends.

APPENDIX

2000 Bridge to Health Survey Questionnaire

HOUSEHOLD SCREENING AND INTRODUCTION

Hello, is this the _____(household address)?

1. **Correct address: continue**
2. **Address changed, out of the 18 geographic areas, brief the purpose of call, thanks, terminate**
3. **List of the reasons of refusals of SHAPE in CATI**

Hello, my name is _____. I am calling from the University of Minnesota on behalf of the Bridge to Health Collaborative. The Bridge to Health Collaborative is made up of over 100 health and medical organizations in Northeast Minnesota and Northwest Wisconsin. They have asked us to call households in the region to conduct a community health assessment survey.

SCREENING RESPONDENT FROM THE HOUSEHOLD

To make sure everyone is selected randomly, we would like to talk to the person who lives in this household, is at least 18 years old, and has had the last birthday. Would that be you or someone else?

1. **Respondent is the person who answered the phone ____**
2. **Respondent is another person and is immediately available, ask to talk to this person ____**
3. **Respondent is another person who is not immediately available
Best time and date to call back _____**
4. **Respondent is non-English speaker (brief the purpose of call, thanks, terminate)
_____**

INFORMED VERBAL CONSENT

(If the respondent is the person who answered the phone first, start with the fourth paragraph at *.)

Hi _____ (first name).

Hello, my name is _____. I am calling from the University of Minnesota on behalf of the Bridge to Health Collaborative. The Bridge to Health Collaborative is made up of over 100 health and medical organizations in Northeast Minnesota and Northwest Wisconsin. They have asked us to call households in the region to conduct a community health assessment survey.

The survey asks questions about your health and health care. The information will be used for planning to improve the health and well being of people in your community. Your household has been randomly selected to participate in this survey.

*Your participation in this survey will be highly appreciated. The interview will take about half an hour. All responses, including your name and address will be kept confidential. You can refuse to answer any question that you personally don't feel comfortable with. You also have the right to refuse to participate in the survey.

Would you be willing to participate in the survey?

Yes _____ **continue**

No _____ **Would you mind telling me why?**

List of reasons of refusals of SHAPE questionnaire in CATI.

For refusals, thank respondent, terminate

For the time is not convenient, explain and reschedule

START INTERVIEW WITH QUESTIONNAIRE

1. Before we begin, I just want to verify that your zipcode is [SAY ZIPCODE]_____

2. Are you male or female?

___ Male

___ Female

3. [SF1]: In general, would you say your health is: [Read]

___ Excellent

___ Very good

___ Good

___ Fair

___ Poor

___ (Don't know/Not sure)

___ (Refused)

4. Compared to others your age, would you say that your health is: [Read]

___ Excellent

___ Very good

___ Good

___ Fair

___ Poor

___ (Don't know/not sure)

___ (Refused)

5. Have you been told by a physician that you currently have any of the following health conditions?

[Read and mark Yes or No for each item]

Allergies (not including allergies to medication)

Asthma

Back problems

Yes

No

- Cancer _____
- Chronic lung disease (including chronic bronchitis or emphysema) _____
- Diabetes _____
- Chronic digestive disease (such as ulcers, colitis, etc.) _____
- Headaches (chronic) _____
- Heart trouble or angina _____
- Stroke related health problems _____
- High blood pressure or hypertension _____
- High cholesterol or triglycerides _____
- Joint problems (such as arthritis, rheumatism or gout) _____
- Kidney or bladder problems (including prostate problems) _____
- Depression _____
- Anxiety or panic attacks _____
- Other mental health problems _____
- Other (please specify) _____

6. How often do you use seatbelts when you drive or ride in a car? [Read]

- Always
- Nearly always
- Sometimes
- Seldom
- Never
- (Never ride or drive in a car)
- (Refused)

7. Yesterday, how many servings of fruits and vegetables did you eat? [Do not read responses.]

[A serving size is 1/2 cup cooked or 1 cup raw] [Do not read]

- 0 servings
- Less than 1 serving
- If 1 or more servings, write number
- (Don't know/Not sure)
- (Refused)

8. In the past year, have you used a community food shelf program?

- Yes
- No
- (Don't know/not sure)
- (Refused)

Next, I will read a list of different types of health insurance. Please answer *yes* or *no* as to whether you personally have each type of insurance right now.

9. Health insurance or an HMO through your work or union Yes No
 DK/NS Ref
10. Health insurance or an HMO through someone else's work or union Yes No
 DK/NS Ref
11. Health insurance or an HMO bought directly by yourself or your family Yes No
 DK/NS Ref
12. Indian or Tribal Health Service Yes No
 DK/NS Ref
13. Health Insurance Risk Sharing Plan (HIRSP) (WI) Yes No
 DK/NS Ref
14. Healthy Start Yes No
 DK/NS Ref
15. Medicare Yes No
 DK/NS Ref
16. BadgerCare Yes No
 DK/NS Ref
17. Medicaid, Medical Assistance, PMAP Yes No
 DK/NS Ref
18. Minnesota Comprehensive Health Association (MCHA) Yes
No DK/NS Ref
19. General Assistance Medical Care (GAMC) Yes No
 DK/NS Ref
20. MinnesotaCare Yes No
 DK/NS Ref
21. Champus or Veterans' benefits Yes No
 DK/NS Ref
22. None Yes No
 DK/NS Ref
23. Other, (Please specify)

24. Concerning your health insurance status for the past year, would you say:
- You were insured for the entire year
- You were insured for part of the year, and uninsured for part of the year
- You were uninsured for the entire year
- (Refused)

25. In the past year, was there a time when you thought that you needed medical care but did not get it or delayed getting it?
- Yes
- No
- (Refused)

(For those who needed medical care but did not get it or delayed getting it)

26. Why was that? (*Mark all that apply—do not read response options*) Were there any other reasons?

- Could not get an appointment
- Didn't know where to go
- Do not like doctors
- Inconvenient time
- Could not get off work
- Had no one to take care of the children
- Transportation problems
- Not treated with respect
- It was too far to go
- Didn't think it was serious enough to go for help
- Too nervous or afraid
- It cost too much
- My insurance didn't cover it
- Other, (Please specify)
- (Refused)

27. This next question is about prescriptions for medicines. Which of these statements best describes you. In the last 6 months:

- I had no prescriptions written for me.
- I had prescriptions written for me and filled them all
- I had prescriptions written for me and did not fill at least one of them.
- Don't know/not sure
- (Refused)

28. (*If did not fill a prescription*) (*If more than one prescription not filled, answer for the last prescription not filled*)

Why was that? [*Do not read response options. Mark all that apply*] Were there any other reasons?

- The medicine was too expensive
- I don't like taking medicines
- I didn't like the side effects
- Transportation problems
- My insurance didn't cover it
- Other: (Please specify)
- (Refused)

29. In the past year, have you postponed dental work?

- Yes
- No
- (Don't know/not sure)
- (Refused)

(*If delayed dental work*)

Why was that? (*Mark all that apply—do not read response options*) Were there any other reasons?

- It cost too much
- Could not get an appointment
- Transportation problems
- Too nervous or afraid
- Don't have insurance
- Other, (Please specify) _____
- (Refused)

30. Do you avoid eating or have trouble eating or drinking certain foods because your teeth or gums hurt?

- Yes
- No
- (Refused)

31. In an average week how many days do you get at least 30 minutes of moderate physical activity like walking, cycling and vacuuming.

- # of days per week
- (Don't know/Not sure)
- (Refused)

32. In an average week how many days do you participate in vigorous physical activity that lasts at least 20 minutes like stair-master, lap swimming, skiing machine and jogging.

- # number of days per week
- (Don't know/Not sure)
- (Refused)

33. (For those who do NOT engage in moderate and/or vigorous exercise totaling 3 or more times per week)

What prevents you from exercising 3 or more times per week? Is there anything else that prevents you from exercising 3 or more times per week? *[Do not read response options. Mark all that apply]* Any other reasons?

- Don't want to exercise
- No benefits to exercise
- Not enough time
- Disabled or too sick
- No facilities for exercising
- No one to exercise with
- Not enough money
- Other, Specify
- (Don't know/not sure)
- (Refused)

The next questions are about your current daily activities. Please try to answer the questions as accurately as you can.

[SF2] I'm going to read a list of activities that you might do during a typical day. As I read each item, please tell me if your health now limits you a lot, limits you a little, or does not limit you at all in these activities.

34. [SF2A] Moderate activities, such as moving a table, pushing a vacuum, bowling or playing golf:

- Yes, limited a lot
- Yes, limited a little
- No, not limited at all
- Don't do these activities
- (Don't know/Not sure)
- (Refused)

35. [SF2B] (*For those limited in activities*)

Is that because of your health?

- Yes
- No
- (Don't know/Not sure)
- (Refused)

36. [SF3A] Climbing several flights of stairs. Does your health limit you a lot, limit you a little, or not limit you at all?

- Yes, limited a lot
- Yes, limited a little
- No, not limited at all
- Don't do these activities
- (Don't know/Not sure)
- (Refused)

37. [SF3B] (*For those with limited activities*)

Is that because of your health?

- Yes
- No
- (Don't know/Not sure)
- (Refused)

The following questions ask about your physical health and your daily activities.

38. [SF4] During the past 4 weeks, have you accomplished less than you would like as a result of your physical health?

- Yes
- No
- (Don't know/not sure)
- (Refused)

39. **[SF5]** During the past 4 weeks, were you limited in the kind of work or other regular daily activities you do as a result of your physical health?
- Yes
 - No
 - (Don't know/not sure)
 - (Refused)
40. **[SF6]** During the past 4 weeks, have you accomplished less than you would like as a result of any emotional problems, such as feeling depressed or anxious?
- Yes
 - No
 - (Don't know/not sure)
 - (Refused)
41. **[SF7]** During the past 4 weeks, did you not do work or other regular activities as carefully as usual as a result of any emotional problems, such as feeling depressed or anxious?
- Yes
 - No
 - (Don't know/not sure)
 - (Refused)
42. **[SF8]** During the past 4 weeks, how much did pain interfere with your normal work, including both work outside the home and housework? Did it interfere:
- Not at all
 - A little bit
 - Moderately
 - Quite a bit
 - Extremely
 - (Don't know/not sure)
 - (Refused)

The next questions are about how you feel and how things have been with you during the past 4 weeks. As I read each statement, please give me the one answer that comes closest to the way you have been feeling; is it all of the time, most of the time, a good bit of the time, some of the time, a little of the time, or none of the time?

43. **[SF12]** During the past 4 weeks, how much of the time has your physical health or emotional problems interfered with your social activities like visiting with friends or relatives? Has it interfered:
- All of the time
 - Most of the time
 - Some of the time
 - A little of the time
 - None of the time
 - (Don't know/not sure)
 - (Refused)

44. [SF9] How much of the time during the past 4 weeks have you felt calm and peaceful?

- All of the time
- Most of the time
- A good bit of the time
- Some of the time
- A little of the time
- None of the time
- (Don't know/not sure)
- (Refused)

45. [SF10] How much of the time during the past 4 weeks, did you have a lot of energy?

- All of the time
- Most of the time
- A good bit of the time
- Some of the time
- A little of the time
- None of the time
- (Don't know/not sure)
- (Refused)

46. [SF11] How much of the time during the past 4 weeks, have you felt downhearted and blue?

- All of the time
- Most of the time
- A good bit of the time
- Some of the time
- A little of the time
- None of the time
- (Don't know/not sure)
- (Refused)

47. In the last year, have you had a flu shot?

- Yes
- No
- (Don't know/not sure)
- (Refused)

My next questions are about different types of health examinations.

48. Have you had your blood pressure checked? [Read Responses]

- Within the past year
- Within the past 2 years
- Within the past 5 years
- 5 or more years ago
- Never
- (Don't know/not sure)

___(Refused)

49. . Have you had your blood cholesterol checked? [Read Responses] [*Blood cholesterol is a fatty substance found in the blood.*]

- ___ Within the past year
- ___ Within the past 2 years
- ___ Within the past 5 years
- ___ 5 or more years ago
- ___ Never
- ___ (Don't know/not sure)
- ___ (Refused)

50. (*For women only*)

Have you had a mammogram? [Read responses] [*A mammogram is an x-ray of each breast to look for breast cancer.*]

- ___ Within the past year
- ___ Within the past 2 years
- ___ Within the past 5 years
- ___ 5 or more years ago
- ___ Never
- ___ (Not applicable, have had a double mastectomy)
- ___ (Don't know/not sure)
- ___ (Refused)

51. (*For women only*)

Have you performed a breast self-exam? *READ RESPONSES.*

- ___ Within the past 3 months
- ___ Within the past year
- ___ Within the past 2 years
- ___ 2 or more years ago
- ___ Never
- ___ (Not applicable, have had a double mastectomy)
- ___ (Don't know/not sure)
- ___ (Refused)

52. (*For women only*)

Have you had a Pap smear? [Read responses] [*A Pap smear is a test for cancer of the cervix.*]

- ___ Within the past year
- ___ Within the past 2 years
- ___ Within the past 3 years
- ___ Within the past 5 years
- ___ 5 or more years ago
- ___ Never

- (Not applicable, had a complete hysterectomy)
- (Don't know/not sure)
- (Refused)

53. (For men only)

Have you had a prostate exam? [Read responses] [*This is commonly called a digital rectal exam. IF FURTHER EXPLANATION NEEDED: A prostate exam is when a doctor or other health professional inserts a finger in the rectum to check the prostate for problems.*]

- Within the past year
- Within the past 2 years
- Within the past 5 years
- Five or more years ago
- Never
- (Don't know/not sure)
- (Refused)

54. . (For both women and men)

Have you had any screening for colon cancer? {*Examples are proctoscopic exam and sigmoidoscopy. NOTE, THIS ALSO INCLUDES FECAL OCCULT BLOOD AND BARIUM ENEMA.*}

- Within the past year
- Within the past 2 years
- Within the past 5 years
- 5 or more years ago
- NEVER
- (Don't know/not sure)
- (Refused)

55. (For women only) [From the 1997 BRFS]

Have you had a hysterectomy? (*A hysterectomy is an operation to remove the uterus or womb.*)

- Yes
- No
- (Don't Know/Not Sure)
- (Refused)

Do you have any of the following in your home?

- 56. Working smoke detector Yes No (Don't know/Not sure)
 Refused
- 57. Fire extinguisher Yes No (Don't know/Not sure)
 Refused
- 58. . Carbon monoxide detector Yes No (Don't know/Not sure)
 Refused

In the past year, have you been:

59. Robbed or burglarized

Yes No (Don't know/Not sure) (Refused)

60. A victim of property damage or vandalism by another person

Yes No (Don't know/Not sure) (Refused)

61. Threatened or intimidated

Yes No (Don't know/Not sure) (Refused)

62. Physically injured by another person

Yes No (Don't know/Not sure) (Refused)

63. Sexually harassed

Yes No (Don't know/Not sure) (Refused)

64. Sexually assaulted

Yes No (Don't know/Not sure) (Refused)

65. Do you use smokeless tobacco, such as snuff or chewing tobacco?

No I never have

I used to but quit

Yes

(Refused)

(For users of smokeless tobacco)

How many times in the past month did you use smokeless tobacco?

Everyday

Several times per week

Once a week

Less than once per week

Not at all

(Refused)

66. Do you smoke cigars?

No, I never have

I used to but quit

Yes

(Refused)

(For cigar smokers)

How many times in the past month did you smoke cigars?

Everyday

Several times per week

Once a week

Less than once per week

(Not at all)

(Refused)

67. Have you smoked at least 100 cigarettes in your entire life?

Yes

- No
- (Don't know/Not sure)
- (Refused)

68. *For smokers of at least 100 cigarettes in entire life*

How old were you when you first started smoking cigarettes on a regular basis?

- Years
- (Don't know/Not sure)
- (Never smoked regularly)
- (Refused]

69. *For smokers of at least 100 cigarettes in entire life, from Prochaska*

Are you currently a smoker?

- Yes
- No
- Refused

If no, How long ago did you stop smoking - would you say less than 6 months ago, 6-12 months ago, or more than 12 months ago?.

- Less than 6 months ago
- 6-12 months ago
- More than 12 months ago.
- Refused

70. *For cigarette smokers who quit more than 12 months ago*

How old were you when you quit smoking?

- Age
- (Refused)

71. *For current cigarette smokers*

On the average about how many cigarettes a day do you now smoke?

- # cigarettes (1 pack = 20 cigarettes)
- (Don't know/Not sure)
- (Refused)

72. *For current smokers*

In the last year, how many times have you quit smoking for at least one day or longer?"

- # times
- (Don't know/Not sure)
- (Refused)

73. For current smokers

Are you seriously thinking of quitting smoking? Would you say...

- Yes, within the next 30 days
- Yes, within the next 6 months
- Yes, more than 6 months from now
- No, not thinking of quitting
- (Refused)

For current smokers who quit at least one day in last year ($Q72 > \text{than } 0$) and for former smokers who quit in last year ($Q69a = 1 \text{ or } 2$)

74. When you tried to quit in the last year, did you use...

Nicotine patch *If yes, Did it help?*

- Didn't use
- Used and helped
- Used and didn't help
- Used and don't know/not sure if helped
- Refused

75. Nicotine gum *If yes, Did it help?*

- Didn't use
- Used and helped
- Used and didn't help
- Used and don't know/not sure if helped
- Refused

76. Nicotine spray *If yes, Did it help?*

- Didn't use
- Used and helped
- Used and didn't help
- Used and don't know/not sure if helped
- Refused

77. Nicotine inhaler *If yes, Did it help?*

- Didn't use
- Used and helped
- Used and didn't help
- Used and don't know/not sure if helped
- Refused

78. Zyban *If yes, Did it help?*

- Didn't use
- Used and helped
- Used and didn't help
- Used and don't know/not sure if helped

Refused

79. Other prescription medicine *If yes, Did it help?*

Didn't use

Used and helped

Used and didn't help

Used and don't know/not sure if helped

Refused

80. Any other methods? What? [Do not read response categories. Check all that apply.]

Acupuncture

Herbs (i.e. ginseng)

Hypnosis

A quit smoking class or group

Books or pamphlets

Video or audio tapes

A website or the Internet

A telephone help-line people call for help to stop smoking

Other

This next question asks for your opinion on a matter. I am going to read you a list of places. For each location, do you think that smoking should be allowed in all areas, in some areas, or not allowed at all?

81. . Restaurants
